Summary

Platform & Infrastructure Engineer with 4+ years at Raytheon designing automated, reproducible systems for high-profile DoD aerospace programs including GPS OCX and JWST. Expertise in infrastructure as code (Terraform, Ansible), CI/CD pipeline integration, container orchestration (Kubernetes), and Linux systems administration. Active DoD Secret clearance.

Experience

Raytheon Intelligence & Space

June 2022 – Present

Aurora, CO

Systems Infrastructure Engineer — Internal R&D

September 2025 – Present

- Architected OS-level configuration and build systems for a custom Linux appliance OS, enabling reproducible and version-controlled system images
- Shipped internal automation tooling to standardize and accelerate developer environment setup, cutting manual configuration overhead and onboarding time

Systems Infrastructure Engineer — James Webb Space Telescope

June 2025 – September 2025 (budget-driven RIF)

- Automated full VM lifecycle management across multiple environments by introducing Terraform infrastructure-as-code workflows
- Developed Ansible-based configuration pipelines enabling consistent, repeatable environment provisioning from a single execution
- Wired provisioning and configuration workflows into GitLab CI/CD, enabling fully automated environment deployment on merge

Systems Infrastructure Engineer — GPS OCX 3F

June 2022 – September 2025

- Owned large-scale, multi-instance Atlassian environments (Jira, Confluence, Bitbucket) across deployments, upgrades, and migrations
- Built custom Jira workflows to enforce Agile processes and eliminate manual tracking overhead
- Stood up and maintained IBM ELM environments (DNG, RQM, GC) with DB2 backends supporting program-wide requirements and test management
- Automated administrative workflows using Python and platform APIs, reducing repetitive operational tasks and improving system efficiency
- Maintained production RHEL systems covering user management, patching, backups, and incident troubleshooting

Staples

November 2019 – April 2022

Print & Marketing Services Supervisor

Boulder, CO

- Managed all operations for 6-person department averaging \$250K/year; grew sales 60% from previous year; maintained a 95% customer satisfaction rating

Education

University of Colorado Boulder

2018 – 2022

Computer Science, Political Science Minor

Boulder, CO

- Relevant Coursework:** Network Systems, Linux System Administration, Operating Systems, Database Systems, Data Structures, Software Development Tools, Intro Data Science, Intro Artificial Intelligence

Projects

HomeLab | Terraform, Ansible, Talos, Kubernetes, ArgoCD, Traefik, Prometheus, Loki, SOPS

- Single-node Proxmox host running a three-VM Talos Kubernetes cluster managed via ArgoCD GitOps; VMs provisioned with Terraform and configured with Ansible
- Full platform stack deployed across 17 sync waves: Traefik ingress with Let's Encrypt wildcard TLS, Authentik SSO with forward-auth, kube-prometheus-stack, Loki log aggregation, and SOPS/age encrypted secrets decrypted in-cluster via KSOPS

WhatAml.cooking | React, FastAPI, EC2, DynamoDB, Cognito

- Full-stack meal planning app with OAuth, weekly planner, auto-generated shopping lists, and a URL importer that scrapes recipes from any site; deployed end-to-end on AWS Elastic Beanstalk

Deckbuilder | React, Vercel, Supabase

- Full-featured Magic: The Gathering and Star Wars: Unlimited deck builder with live card data from Scryfall, suggestions from EDHREC, and tournament results from EDHTop16 and MTGTop8

Technical Skills

Infrastructure & DevOps: Terraform, Ansible, Kubernetes, ArgoCD, Traefik, Prometheus/Grafana, Loki, GitHub Actions, Docker

Linux & Systems: RHEL, Linux appliance OS, Linux system administration

Languages & Frameworks: Python, Bash, React, Next.js, FastAPI

Platforms & Tools: AWS, Vercel, Supabase, Atlassian Suite, IBM ELM, Git

Security Clearance: Active DoD Secret
